RE: MITIGATED NEGATIVE DECLARATION FOR ZINFANDEL SUBDIVISION
PROJECT DATED AUGUST 7, 2025, STATE CLEARINGHOUSE NUMBER
[2025080319](#)

Dear Michael Allen,

The Department of Toxic Substances Control (DTSC) reviewed the Mitigated Negative Declaration (MND) for the Zinfandel Subdivision Project (Project). The Project applicant, Crown Realty Property Management, proposes to develop a 51-lot subdivision containing 51 single-family homes, 12 accessory dwelling units (ADUs), 10 junior ADUs, and related improvements on approximately 9.56 acres. The existing single-family dwelling, the detached garage, and the private pedestrian bridge on the project site would be demolished. Additionally, the existing vineyards on the project site would be removed, as well as 29 trees. DTSC recommends and requests consideration of the following comments:

1. When agricultural crops and/or land uses are proposed or rezoned for residential use, several contaminants of concern (COCs) can be present. The Lead Agency shall identify the amounts of Pesticides and Organochlorine Pesticides (OCPs) historically used on the property. If present, OCPs requiring further analysis are dichloro-diphenyl-trichloroethane, toxaphene, and dieldrin. Additionally, any level

of arsenic present would require further analysis and sampling and must meet approved local area baselines or thresholds. If they do not, remedial action must take place to mitigate them below those thresholds. Additional COCs may be found in mixing/loading/storage areas, drainage ditches, farmhouses, or any other outbuildings and should be sampled and analyzed. If smudge pots had been routinely utilized, additional sampling for Polycyclic Aromatic Hydrocarbons and/or Total Petroleum Hydrocarbons may be required. These recommendations should be adhered to and become part of the environmental document. Please refer to the [DTSC's Human and Ecological Risk Office \(HERO\) webpage](#) for the most recent guidance and screening levels.

2. If buildings or other structures are to be demolished on any Project sites included in the proposed Project, surveys should be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition, and disposal of any of the above-mentioned chemicals should be conducted in compliance with California environmental regulations and policies. In addition, sampling near current and/or former buildings should be conducted in accordance with [DTSC's Preliminary Endangerment Assessment \(PEA\) Guidance Manual](#).
3. All imported soil/fill material should be tested to assess any contaminants of concern meet screening levels as outlined in [DTSC's PEA Guidance Manual](#). Additionally, DTSC advises referencing the [DTSC Information Advisory Clean Imported Fill Material Fact Sheet](#) if importing fill is necessary. To minimize the possibility of introducing contaminated soil/fill material, there should be documentation of the origins of the soil/fill material and, if applicable, sampling be conducted to ensure that the imported soil/fill material are suitable for the intended land use. The soil sampling should include analysis based on the source of the soil/fill and knowledge of prior land use.

DTSC would like to thank you for the opportunity to comment on the MND for the Zinfandel Subdivision Project. Thank you for your assistance in protecting California's
